This kit for the ProMaster DX system includes four 17-foot counterpoise elements that are not to be laid on the ground, which will:

- Enhance Low Band performance
- Consistent omni-directional patterns
- Stabilize DX performance

Quick Instructions:

- Install Two/Four raised counterpoises to give the antenna better symmetry and less sensitivity to the surroundings.
    - Place two at 180 degrees from one another, or four at 90 degrees, to the bolt on the ground side of the Alpha Match.
        - These are to be sloped down away from the antenna and should not be laid on the ground.
