Gutters are HUGE antennas, use the HOA Buster as a tuner free system to transform your gutters into a large, stealthy, and easy-to-use HF, VHF, UHF, GMRS, and CB antenna.

Specifications

Frequency: 10M to 80M (29.7MHz to 3.5MHz), 2M, CB, GMRS, plus 440 & 900 MHz.
Max Power (Watts): 250 watts PEP SSB (USB & LSB), 125 watts CW, or 25 watts for digital, AM, or FM modes.
RF Connection: SO-239.

Included

- Quantity 1, HOA Buster Matching network in 6 different color choices.
- Quantity 1, Ground Spike & Mount.
- Quantity 1, Eight-foot jumper wire.

NOTE – You can request a custom length for the jumper wire, but it must be at least 18 inches and no more than 20 feet to prevent sagging to the ground. When checking out, simply add a note in the Comment field with your desired length.

Analysis

Deployment

1. Push the included Mounting Spike into the ground.
2. Extend the jumper wire between the Match and downspout, keeping it off the ground, and secure it with the included clip at the bottom of your downspout.
3. Then attach any length of coax to the connector on the bottom of the AutoMatch and run your coax to your equipment.

Installation Video

Options

For portable or base deployments without a gutter that provide tuner free operations from 10-80 meters, add the Optional 60-foot End-fed element + Nut/Bolt. CLICK HERE FOR MORE INFORMATION.

Buy & Try

We offer a $29.88 * Buy & Try option, which is simply the restocking fee under our *Returns program.

To test if it the HOA Buster is working once installed, use the Digital WSPR FT8 Modes in 3 quick easy steps to test the antenna.

Considerations

If you are wondering if option A or B is the best place to connect your HOA Buster, then here is how to test it both locations to see which works better for you: Digital WSPR FT8 Modes in 3 quick easy steps to test antennas

Remember to check out our additional Tips for the HOA Buster!

Note that what detracts from gutters performing well as an antenna ‘out in the open’, is a home with either steel/aluminum or ‘Stucco Wire Lath’, often called Chicken Wire. **Fortunately**, many modern stucco systems have transitioned to a Fiberglass Mesh Lath. Metal structures will change the way RF is received or transmited.

10-80M HF, UHF, and VHF HOA Buster gutter antenna

Verified review - view original

I moved into a restrictive HOA in Hawaii. It’s already challenging living on an island where “everywhere is DX for us” , but the HOA rules make it nearly impossible to get an effective antenna up. I installed the HOA Buster and wow! I was admittedly skeptical, but it works surprisingly well! After I found a good spot where the downspout was at the end of the run, I hooked things up, then went around my gutters with self tapping screws and ensured good connectivity between segments. Well over 100ft of gutter is in play, and I’m able to tune 10-160m and it works! Even with TechShield (metal w/ insulation) installed in the adjacent roof, everything still tunes and performs well! The HOA Buster has rescued my hobby!

10-80M HF, UHF, and VHF HOA Buster gutter antenna

Verified review - view original

I am a first time customer to Alpha. Prior to my purchase I had several technical questions on the HOA Buster. My email questions were promptly answered and when my order was shipped I was given a heads up. I was very pleased with their customer service.

10-80M HF, UHF, and VHF HOA Buster gutter antenna

Verified review - view original

Very pleased with the antenna! Was able to set it up in about 30 minutes (most of that was finding an appropriate patch cable. Signed into a early NTS net, fine business!
