This is your chance to get a great price on a Limited Stock NOS (new old stock) 17′ 9″ telescopic element, which is perfect for building the your antenna systems. The only difference between the New and the NOS version is the threads on the NOS were manually tapped for 3/8 24 and the New versions were tapped by our Lathe.

> I recently built a POTA PERformer antenna using a 17′ 6″ telescoping whip I bought at a hamfest several years ago. I needed a few more inches to improve the match on 20m CW so I bought the Alpha 17′ 9″ telescoping whip. The Alpha telescoping whip is so much better constructed than the one I had. It’s sturdier and shorter when collapsed. Plus it works great with the PERformer antenna I built. Glad I bought it! Alan S. Verified owner September 30, 2025

Read more here about the **HF VHF UHF HexTenna System.**

Details

Laser engraved with “Alpha Antenna”, not Chinese junk re-branded with a Return Address label.

- 304 stainless steel telescopic element
- Milled Base with ‘**Alpha Antenna**‘ laser engraved on it, not a return address label

2-20M 17’9” NOS Element for POTA Performer & HexTenna

Verified review - view original

The length of the antenna was well thought out. Take note that a quarter-wave antenna could become electrically shorter if you elevate it on a tall tripod, so the extra length of the whip fixes this.
