

Set the HF SWR Sounder on the tuning box of any magnetic loop antenna. Then as you adjust to the lowest SWR using CW or FM mode, listen for the loudest beep.

The SWR Sounder adds functionality to or replaces Antenna Analyzers.

The sounder works as advertised. Tuning a mag loop antenna becomes child's play! When I had a question about how to use the sounder in conjunction with the built-in tuner on my Xiegu G90 customer service responded quickly.

This small device makes tuning my mag loop a breeze! The audio tone allows me to tune by ear rather than sight!
